Whitechapel, London

EDUCATION

Queen Mary University Of London <i>Computer Science with Industrial Placement Bsc (Hons) Predicted 1st Class.</i>	London, United Kingdom <i>Sep. 2024 – Jun 2028</i>
Stepney All Saints Sixth Form <i>A-Level: Computer Science A, Physics A, Maths A, EPQ A (AS).</i>	London, United Kingdom <i>Sep. 2022 – Jul 2024</i>
Stepney All Saints Church of England Secondary School <i>9 GCSEs grades 7-9, including Mathematics (8) and English (8).</i>	London, United Kingdom <i>Sep. 2017 – Jul 2022</i>

EXPERIENCE

Software Engineer <i>Ihsan Consulting & LimitStrike</i>	Mar. 2026 – Jun 2026 <i>Remote, London</i>
• Backend & Data Modelling: Built the database layer for Rsky, a vulnerability-management platform that consolidates security scanner findings into one normalised schema, using Python, Pydantic, and Supabase (PostgreSQL). • Schema Design: Architected a 21-column relational schema unifying two different scanner formats (OWASP ZAP JSON, OpenVAS XML) into one model, with database-level check constraints and GIN-indexed array fields for fast querying. • Idempotent Ingestion: Implemented 6 read/write functions with upsert logic and a natural-key unique constraint so re-running scans updates existing records instead of creating duplicates, backed by a typed exception hierarchy (4 custom error classes) for robust error handling.	
Design Intern <i>Principl</i>	Nov. 2025 – Jan. 2026 <i>Remote, London</i>
• Frontend Design & Prototyping: Built interactive, responsive web pages using Framer, applying component-based structure, layout systems, and responsive behaviour. • Product Thinking: Interpreted client briefs, translated requirements into structured features, and iterated designs based on usability, clarity, and technical feasibility. • Stakeholder Collaboration: Conducted weekly check-ins and feedback iterations, achieving a 95% acceptance rate on submitted designs and ensuring on-time delivery across all tasks.	
Microsoft I Accelerator Programme <i>Microsoft UK</i>	Jul. 2025 <i>London, United Kingdom</i>
• Agile-Inspired Development: Led a 5-person team to design SparkHive, a Microsoft 365 Copilot-powered admin assistant, applying Agile principles such as iterative design, weekly check-ins, and feedback loops. • Prototyping & Designing: Produced and implemented a working prototype design using Figma and Prezi, optimising for both functionality and user experience. • Analytical Problem-Solving & Stakeholder Communication: Defined project requirements through stakeholder questioning, resolving ambiguity, and improving team efficiency by 30%. • Technical Delivery & Leadership: Delivered a working prototype and pitch to 30+ stakeholders, winning programme and later the MVP award.	
Web Development Intern (HAF Programme Page) <i>The Akshaya Patra Foundation</i>	May. 2025 – Jul. 2025 <i>Remote, London</i>
• Full-Stack Development: Developed and deployed a 12-section responsive landing page using WordPress, PHP, and HTML/CSS. • Stakeholder Management: Conducted requirement-gathering sessions, aligning UI/UX design with business goals and scalability.	

PROJECTS

NVIDIA Hack For Impact London <i>NVIDIA Nemotron, ElevenLabs, NVIDIA DGX Spark</i>	Jun. 2026
• Multi-Agent Systems Engineering : Built the shared PostgreSQL event store behind a five-agent city-operations platform, ingesting live London feeds (TfL, weather, air quality) with idempotent upserts to de-duplicate polled data. • Local AI on NVIDIA DGX Spark Integrated NVIDIA Nemotron locally via an OpenAI-compatible endpoint, turning a RAPIDS (cuDF/cuGraph) relationship graph into grounded recommendations with all inference on-device.	

- **Voice & Forecasting Interface** Delivered an ElevenLabs voice interface and a FastAPI/React dashboard surfacing impact forecasts, prioritised recommendations, and persistent session memory.

FDM Expense App | *React, CSS, JavaScript, MySQL, Python Django*

Mar. 2026

- **Full-Stack Application Development:** Developed an expense management system for the FDM Group to support the submission, approval, and processing of FDM employee expense claims.
- **System Design and Implementation:** Contributed to front-end workflows, back-end logic, and database integration to create a structured and efficient claims process.

NHS Waiting List Database System | *SQL, ER Modelling, Relational Design*

Nov. 2025

- **Systems Reliability & Data Integrity:** Modelled and validated a multi-entity system with strict constraints, mirroring real-world operational systems where correctness and reliability are critical.
- **Systems Thinking & Data Reliability:** Implemented primary/foreign key constraints and 15+ complex SQL queries to analyse waiting times and patient flow across regions.

TECHNICAL SKILLS / ACHIEVEMENTS

Programming Languages: Python, Java, JavaScript, SQL, HTML/CSS, React.js, Django, Supabase.

Other: upReach Tech500 Associate, Board Of Directors @ QM Machine Learning Society 2025/2026.
